PROFILE SUMMARY

Results-driven Java Backend Developer with 4.5+ years of expertise in designing scalable, low-latency systems. Core skills: Java 8/11/17/21, Spring Boot 3, Spring Security, Spring Data JPA, Spring Cloud, Apache Kafka, Docker, Kubernetes, AWS, Redis, CI/CD pipelines, Spring AI and LangChain4j for AI/LLM integration. Adheres to OWASP Top 10 secure coding practices; experienced with OAuth2, JWT, and SAML-based authentication flows. Demonstrated track record of reducing checkout latency by 35% for enterprise clients, cutting deployment cycles by 50%, and improving system reliability at scale. Proficient in production support and incident triage with strong stakeholder communication. Seeking senior backend engineering roles at product-focused technology companies.

SKILLS

Languages & Core: Java 8/11/17/21 (Virtual Threads/Project Loom), SQL, OOP, Multithreading, Data Structures, Design Patterns

Frameworks: Spring Boot 3, Spring Security, Spring Cloud, Spring Data JPA, Spring Batch, Spring MVC, Spring AI, LangChain4j (learning)

AI/LLM Integration: Spring AI, LangChain4j – RAG pipelines, LLM API integration, vector store connectivity, prompt engineering

Microservices & APIs: RESTful APIs (JSON/XML), GraphQL (basics), Microservices Architecture, API Design, Swagger/OpenAPI

Auth & Security: OAuth2, JWT, SAML, OIDC, Spring Security (RBAC), OWASP Top 10 secure coding practices

Frontend (Exposure): HTML, CSS, JavaScript; basic React for API integration testing and UI debugging

Messaging: Apache Kafka, RabbitMQ

Cloud & DevOps: AWS (EC2, S3, RDS, CloudWatch, IAM), Docker, Kubernetes, CI/CD, Terraform (learning)

Databases: PostgreSQL, MySQL, MongoDB, Redis (caching, session management), Hibernate/JPA

Monitoring: ELK Stack (Elasticsearch, Logstash, Kibana), Grafana, Prometheus

Testing: JUnit 5, Mockito, TestNG, Selenium WebDriver

Tools: Git, Maven, Apache Tomcat, IntelliJ IDEA, Eclipse, Postman

WORK EXPERIENCE

Software Engineer (Java Backend) — Tata Consultancy Services 06/2022 – Present

- Architected and delivered 25+ scalable RESTful APIs with JSON/XML payloads using Spring Boot 3 and Hibernate ORM, reducing checkout latency by 35% and supporting 500K+ daily transactions for enterprise clients.
- Designed event-driven microservices architecture with Spring Boot and Apache Kafka, handling 5,000+ requests per second with sub-100ms latency.
- Integrated AI/LLM capabilities using Spring AI and LangChain4j — built RAG pipelines, connected to vector stores, and embedded LLM-powered features into microservices for intelligent document processing and query automation.
- Deployed and managed containerized microservices on AWS (ECS, EC2, S3, CloudWatch) using Docker and Kubernetes, improving deployment reliability and scaling responsiveness.
- Optimized backend processing using Java multithreading techniques, reducing processing times by 40% for high-concurrency batch workflows.
- Secured APIs with Spring Security (JWT, OAuth2, RBAC) following OWASP Top 10 secure coding practices, achieving 100% compliance with security policy controls across all services.
- Streamlined CI/CD pipelines with Jenkins and GitHub Actions, reducing deployment cycle times by 50%; containerized all services with Docker using Maven builds for consistent environment parity.
- Provided production support and incident triage using ELK Stack and Grafana dashboards; communicated resolution progress to stakeholders and reduced MTTR by 30%.

Automation Engineer (Java) — Tata Consultancy Services 12/2021 – 06/2022

- Architected a microservices landscape with Spring Boot and Apache Kafka, managing 5,000+ requests per second.
- Automated 100+ manual test cases using Selenium WebDriver and Java, increasing testing efficiency by 70% and reducing production defects by 15%.
- Designed a regression testing automation framework using TestNG and JUnit, cutting test cycle duration from 5 days to 2 days.
- Collaborated within a 10-member cross-functional team to achieve 95% on-time delivery across all sprint milestones.

PROJECTS

HTML Comparison Service

- Designed a Spring Boot microservice for low-latency pixel-level HTML comparison, detecting differences in visual elements (images, fonts, layout) with 99.9% accuracy.
- Improved document verification accuracy by 30% and reduced processing time by 20% through custom parsing algorithm optimisation.
- Deployed service on AWS EC2 with CloudWatch alerting and auto-scaling for production workloads.

Task Scheduler

- Developed an event-driven task scheduler using Spring Boot and Java Scheduler for periodic background jobs — database updates and user notifications — handling 10,000+ tasks daily.
- Reduced manual intervention by 50% and improved system reliability through idempotent job execution with retry logic.

Automated Testing Framework

- Built a Selenium WebDriver + TestNG automation framework, achieving 70% test coverage across critical application modules.
- Reduced manual testing time from 3 days to under 1 day, enabling faster release cadence with consistent regression coverage.

ACHIEVEMENTS & AWARDS

- Star of the Month Award (December 2025): Received for developing highly scalable APIs.
- Star of the Month Award (August 2024)
- Star Team Award (August 2022): Delivered a complex project within strict deadlines.
- On the Spot Award (June 2023): For resolving critical performance bottlenecks.

EDUCATION

Bachelor of Engineering – Biomedical Engineering (CGPA: 7.3) 2020

Shri G.S. Institute of Technology and Science, Indore | Relevant self-study: Data Structures & Algorithms, Operating Systems, DBMS, System Design

CERTIFICATIONS & LEARNING

- AWS Certified Developer – Associate (Target: Q3 2026) — actively preparing
- Certified Kubernetes Application Developer (CKAD) – Target Q1 2027
